Lisp is Cool!

Object-Oriented Programming is Cool!

But, OOP isn't THE Answer

OOP is a useful tool, but it isn't the final solution to all things programming. It won't solve world hunger, but it does solve a restricted subset of the problem. Other things that are sometimes useful tools, but aren't **the answer**:

1. FP,
2. Side effects or the lack thereof,
3. Unit tests, BDD,
4. Type systems,
5. Monads,
6. Your favorite thing in programming.
7. ~~Lisp~~

Getting Started

1. Install Linux.

`http://aptosid.com`

2. Install SBCL and some libraries.

```
apt-get install sbcl{,-doc,-source} \  
cl-{asdf,cffi}
```

3. Install Emacs and SLIME *(Not strictly required.)*

```
apt-get install emacs{,-goodies-el} cl-swank \  
cl-swank slime common-lisp-controller
```
